[Music] you [Music] I'm Jacob Hornberger president to the Future Freedom Foundation one of the most unusual aspects of the Kennedy autopsy that was conducted by the US military on the evening of November 22nd 1963 was that there were two separate brain examinations why is that unusual well because in most autopsies there's only one brain examination here they were two now mind you the pathologists in the case may be commanders boswellia Humes Army think we're all claiming that there was just one brain examination but the staff of the assassination records Review Board in the 1990s determined that they had to be in giving a false story about this one brain exam now how did they figure that out well first the first reason was the timeline there was testimony in evidence establishing that the brain examination had taken place within two or three days of the assassination and the autopsy November 22nd 1963 there was other evidence and testimony establishing that the brain examination actually took place about a week or more later but even more revealing the ARR be figured out that a third person at the first brain examination was different from a third person who attended the second brain examination now there was a commonality among the two brain examinations at the first one it was attended by commanders Humes in Basra at the second it was attended by commanders human body Boswell's but in the first one it was attended by John T stringer as the third person and at the second one it was attended by Colonel Fink the three

[00:02:00 \(https://www.youtube.com/watch?v=J-0-afYiADQ&t=120s\)](https://www.youtube.com/watch?v=J-0-afYiADQ&t=120s)

attended by Colonel Fink the three pathologists now stringer testified that at the first brain is amination the pathologist sectioned of the brain that means they sliced it like a loaf of bread standard procedure not a gunshot wound to the head the idea is that they want to study it in order to determine the trajectory of the bullets at the second brain examination the brain was not sectioned it was a regular-sized brain and there's something important to note here that once you section a brain you slice it into slices it is impossible to put it back together which means that the brain examined in the second brain examination necessarily had to be belong to someone else now that would not have been difficult the autopsy was conducted on our US Navy military installation Bethesda Naval Medical Center that was where the morgue was and that was where Bethesda Navy medical school was and as we all know in medical school there's plenty of organs so that the medical students can practice would not have been difficult to get a substitute brain here's something else to consider that's rather unusual in an autopsy is standard procedure to weigh the brain they weight the brain in this case now most everybody acknowledges that the gunshot wound that hit the president in the head blasted out about 25% maybe even a third of his brain and yet when they weighed the brain it weighed more than an average person's full-sized brain how is that possible what are we to make of all this what are we to make of the fact that there's two separate brain examinations one which necessarily could not have been the president's what are we to make of the fact that that three military pathologists are giving a false story about having one brain examination what are we to make of the fact that Sondra Spencer yes Navy petty officer

[00:04:01 \(https://www.youtube.com/watch?v=J-0-afYiADQ&t=241s\)](https://www.youtube.com/watch?v=J-0-afYiADQ&t=241s)

Sondra Spencer yes Navy petty officer testifies at the photographs and the official record are not the ones she developed on the weekend of the assessments what are we to make of the fact that she testifies that the photograph she developed showed a big exit sized hole in the back of President Kennedy's head which matched which with what treating physicians at Dallas Parkland Hospital were sent what are we to make of the fact that the official autopsy photographs showed the back of the president's had to be fully intact what are we to make of the fact that a team of Secret Service agents brandished guns and threatened you deadly force against the medical examiner of Dallas County Texas for doing the duty which they prevented him from doing by force the duty to conduct an autopsy that was required by Texas law there in Dallas what are we to make of the fact that Lyndon Johnson was patiently waiting out on the tarmac at Dallas Love Field I mean seats removed from the back of the plane waiting for that casket to be delivered so that he could fly it to Andrews Air Force Base and put it in the hands of the military if you think all of this is mysterious wait till you hear the story about Robert Newton [Music]
